

## FAQs about the Kleen-Screen

**What is it?** Kleen-Screen is patented filter system that wraps around your A/C condenser unit (the outside unit). It prevents airborne debris from getting into your condenser coils and restricting airflow.

**How does it attach?** Kleen-Screen attaches to your unit with unique magnetic mounting strips, so it snaps on and snaps off. Security straps are provided to insure it doesn't come off in high winds.

**How does it work?** Kleen-Screen filters debris from the air that gets pulled through your A/C condenser coils. Your unit processes millions of cubic feet of air each week. Without the Kleen-Screen, airborne debris will gradually clog your coils, reducing efficiency of your system and increasing the electricity consumed!

**Will it fit my unit?** Yes. One size fits virtually all residential units. Kleen-Screen is 39" tall x 120" long. It fits most home condenser units with coil openings measuring up to 38" tall x 115" long.

**How do I install it?** Kleen-Screen "cuts to size" to fit your condenser unit, using only heavy duty scissors.

**Will Clean Screen work for window units, thru-the-wall units, or split-component units?** Yes, as long as there are flat metal surfaces on either side of the coil opening(s) to attach the magnetic strips. Kleen-Screen provides all of the same energy-saving benefits for all types of units.

**What are the benefits?** Kleen-Screen keeps debris out of your coils:

- Clogged coils cause your a/c condenser to use up to 30% more electricity than it should.
- Clogged coils increase operating temperatures and cause excessive wear on components.
- Clean coils allow your a/c condenser to operate at the peak efficiency it was designed to provide.
- Efficient operation uses less electricity and provides better cooling
